SUMMARY

Software engineer with 3 years of experience shipping web and mobile products in React, TypeScript and Node.js. Since 2024 I have worked remotely on the product team of a US startup, building features in the interface, in the services behind it and in the end to end test suite. I also helped launch a React Native app used by hundreds of dental clinics.

EXPERIENCE

Pivot Technologies Jun 2024 to Present

Software Developer (Contract), Remote, US startup

- Ship features for a real time collaboration platform with chat, video calls and a block based page editor, on web and mobile, using React, TypeScript and React Native.
- Built breakout groups for live video calls: hosts split a session into smaller groups and start them all with one click.
- Extended the Lexical rich text editor with new content blocks, and fixed a cursor bug that interrupted typing on every save.
- Built the notification service with a teammate in Node.js and gRPC, including push notifications, reminders and user preferences.
- Built the frontend internationalization setup and shipped most of the product's localization.
- Rebuilt pages of the company website in Next.js, including the home page.
- Added 51 Playwright end to end test files and reworked CI so expensive jobs wait for cheap checks, flaky tests go to quarantine, and test shards stay balanced with current timing data.
- Fixed authorization gaps in the Go gRPC gateway and message delivery bugs in live chat.

Serodonto Aug 2023 to Apr 2025

Junior Software Developer, promoted from Software Developer Intern, Brazil

- Helped build a React Native app with 20+ screens that dental clinics use for scheduling, bookings and patient records.
- Connected the app to REST APIs and to WhatsApp for patient communication.
- Implemented client specific business rules in a product used by hundreds of clinics.
- Helped launch the app on Google Play and the App Store; the Android version has passed 1,000 downloads.
- Contributed to a React PWA, Next.js automations, and Flutter and C#/.NET projects.

SKILLS

Frontend: TypeScript, JavaScript, React, Next.js, React Native, Expo, HTML, CSS

Backend: Node.js, Go, gRPC, REST APIs, PostgreSQL, SQL Server, C#/.NET

Testing and tools: Playwright, end to end testing, CI/CD, GitHub Actions, Docker, Git

Languages: Portuguese (native), English (professional), Spanish (basic)

EDUCATION

Federal University of Santa Catarina (UFSC) Oct 2021 to Dec 2026 (expected)

B.S. in Information Systems, Florianópolis, Brazil
